

McAfee ePolicy Orchestrator

Security management software for systems, networks, data, and compliance solutions

Connect Security to Your Business with McAfee ePO

Centrally manage enterprise security

- Open framework unifies security management for systems, networks, data, and compliance solutions
- Extensible platform integrates with and leverages your existing IT infrastructure

Take action with confidence

- Comprehensive views of your security status and threats—both external and internal—provides the insight you need, when you need it
- Actionable dashboards with advanced queries and reports shorten time from insight to response
- Rogue system detection identifies unknown assets on your network so you can bring them under control

Reduce complexity and streamline processes

- Guided configuration, Software Manager, and predefined dashboards make getting started a snap
- Tag-based policy assignment precisely targets assignment of predefined security profiles to systems based on their business role or at-risk status.
- Task catalog and automation capabilities streamline administrative processes and reduce overhead
- A single web interface brings together security silos for maximum visibility. A single agent reduces the risk of endpoint conflicts.

Scale for enterprise deployments

- Enterprise-class architecture supports hundreds of thousands of devices on a single server
- Supports complex IT environments

McAfee® ePolicy Orchestrator® (McAfee ePO™) software, the foundation of McAfee Security Management platform, unifies management of endpoints, networks, data, and compliance solutions. More than 45,000 customers use McAfee ePO software on nearly 60 million nodes to manage security, streamline compliance processes, and increase visibility. With its scalable architecture, fast time to deployment, and ability to leverage your enterprise systems, McAfee ePO is the most advanced security management software available.

Today, more than ever, IT organizations are taking a strategic approach to security—consolidating security portfolios to reduce complexity, investing in next-generation technologies to improve protection, and integrating with existing IT assets to streamline processes. McAfee ePolicy Orchestrator software enables tens of thousands of customers to centrally manage security, achieving dramatic efficiencies.

Extensible Workflows Streamline Security and Compliance Processes

McAfee ePO allows IT administrators to unify security management across endpoints, networks, data, and compliance solutions from McAfee and third-party solutions. The foundation of McAfee Security Management Platform, McAfee ePO helps companies master the security and compliance challenges of today and tomorrow with an open solution.

McAfee ePO provides flexible automation capabilities so you can deploy security quickly and respond to issues as they arise. You can define how McAfee ePO should direct alerts and security responses based on security events in your environment, as well as create workflows between your security and IT operations systems. As a result, you save time and money—with more effective security. McAfee ePO helps you drive down the cost and complexity of managing security.

Automate and streamline your workflows:

- Streamlined installation, Software Manager, guided configurations and quick-start deployment capabilities, help you secure your environment quickly—and keep it secure
- Automation of policy assignment, task scheduling, and incident responses speed response times
- Communication within and between endpoints, networks, data, and compliance solutions reduces security gaps and management complexity
- Rogue system detection identifies unknown assets that gain network access, enabling faster time to protection
- Customizable report templates, personalized for diverse audiences with run-time parameters reduce report development time
- New web application programming interface (API) allows you to more fully leverage existing enterprise assets and streamline work-flows to enhance efficiencies and simplify compliance efforts

Administrators can tune McAfee ePO to streamline their jobs by personalizing their workspace, creating actionable dashboards in a drag-and-drop environment and automating reports and workflows.

Achieve end-to-end visibility:

- A unified point of reference for enterprise security enables you to quickly identify and understand relationships between security events throughout your environment
- A personalized web console provides flexibility for managing enterprise-wide security
- Advanced charting, flexible query capabilities, and support for querying external data offers at-a-glance understanding of complex issues
- Actionable dashboards with drag-and-drop, resizable monitors allow you to include custom URLs

Enterprise-Class Architecture Dramatically Reduces Costs with Proven Scalability

As the industry's most scalable security management software, McAfee ePO reduces both operational and capital costs of security administration. McAfee ePO allows enterprises to manage hundreds of thousands of devices with a single server, dramatically reducing costs associated with enterprise deployments. The scalable architecture and performance enhancing capabilities of McAfee ePO help reduce bandwidth costs and ensure reliability of the management infrastructure.

Scalability features include:

- Highly scalable server reduces infrastructure and maintenance costs
- Agent handlers allow management of endpoint systems, even when disconnected from the network
- New repository replication methods reduce bandwidth consumption to make more efficient use of slow-speed WAN links
- Policy sharing across servers and roll-up reporting reduce administrative overhead
- Flexible policy administration supports complex environments
